

Simple to use eddy current crack detection unit.

# CrackcheK

## CrackcheK

The CrackcheK is a simple to use eddy current crack detection unit, ideal for fast and accurate inspection of all types of components and structures.

The small size makes the CrackcheK unit perfect for inspection in restricted areas and for use in rope access applications.

The CrackcheK is self contained, battery powered and requires no external power supply. The system uses a standard eddy current test block, making initial set up fast, accurate and traceable.

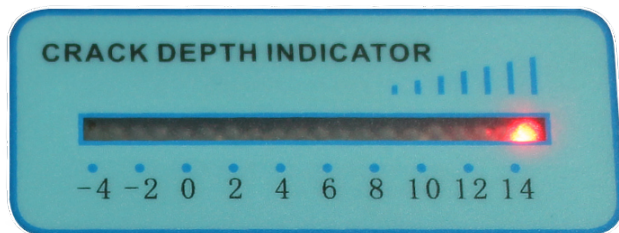

CrackcheK offers the user simple eddy current inspection for the detection of surface and subsurface cracks and other discontinuities.

## General Unit

- Fast and accurate eddy current inspection for structures, pipe work and street furniture
- Easy to use
- Fast set up using standard test blocks
- Detects surface breaking and near surface cracks
- A range of probes available to suit all applications
- Long life rechargeable Li-Ion battery
- Supplied with standard weld scan probe, charger, slip on case, test block and carry case
